DETAILED ACTION

Election/Restrictions

1. The applicant's election with traverse in the reply filed on 6/30/2005 is acknowledged. The traversal is on the ground(s) that the applicants believe that the search for all species, and examination of the entire application could be made without serious burden. The examiner traverses because the search between each of the inventions of all species would be non coextensive and burdensome.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 11-21 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected with traverse, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 6/30/2005.

Claim Objections

3. Claim 10 is objected to because of the following informalities:

In claim 10: the word "insulting" (line 12) needs to be corrected.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 1 rejected under 35 U.S.C. 103(a) as being unpatentable over Miyashita et al. (US 5,502,470) in view of Hirsh et al (US 6,179,978).

As applied to claim 1, Miyashita et al. disclose a process of manufacturing a nozzle plate for an ink-jet print head, the process comprising: a masking step of applying a resist (11, Fig. 7b) on the inside surface of the substrate, and charging the nozzle holes (3) with the resist such that portions of the resist protrude outwardly from openings of the nozzle holes on the outside surface (sequence Fig. 7a-7b).

However, Miyashita et al. does not disclose a non-wetting-layer forming step of forming the non-wetting layer on the outside surface in a plating operation; and an unmasking step of removing the resist from the substrate.

Hirsh et al teach a non-wetting-layer (90) forming step of forming the non-wetting layer on the outside surface in a plating operation; and an unmasking step of removing the resist from the substrate (column 9, lines 40-60+). It would have been obvious to one ordinary skill in the art at this time the invention was made to modified the Miyashita et al method by including forming a non-wetting layer and unmaking step, taught by Hirsh et al, to provide the nozzle plate with same degree of liquid ink resistance accumulation (see column 5, lines 62-66).

Allowable Subject Matter

6. Claims 2-10 are allowed.

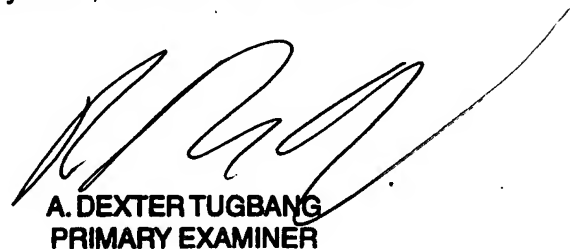

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
